AES Algorithm

ADVANCED ENCRYPTION STANDARD

Overview

- Overview of the AES Algorithm.
- It's a Block Cipher
- Encrypts blocks of size 128 bits where DES 64 bits.
- Uses a key of size 128, 192, and 256 bits where DES 56 bits.

- Symmetric cipher: uses same key for encryption and decryption.
- Uses multiple rounds which all perform the identical operations.
- Different subkey in each round derived from main key

- Key in binary is 128,192 and 256 bits.
- Key is in hexadecimal (16 bytes).
- •We will divide key into words (8 bit each).
- We will fill the words into the matrix.

Key (128 bits) -

Key in Hex

73 61 74 69 73 68 63 6a 69 73 62 6f 72 69 6e 67

$$\begin{bmatrix} b_1 & b_5 & b_9 & b_{13} \\ b_2 & b_6 & b_{10} & b_{14} \\ b_3 & b_7 & b_{11} & b_{15} \\ b_4 & b_8 & b_{12} & b_{16} \end{bmatrix} \begin{bmatrix} 73 & 73 & 69 & 72 \\ 61 & 68 & 73 & 69 \\ 74 & 63 & 62 & 6e \\ 69 & 6a & 6f & 67 \end{bmatrix}$$

- Key 128 bits.
- Word is a 32 bits = 4 byte.
- For 128 key bit we will have from W0 to W43.
- For 192 key bit we will have from W0 to W51.
- For 256 key bit we will have from W0 to W59.
- •HOW CAN WE GENERATE OTHER WORDS?

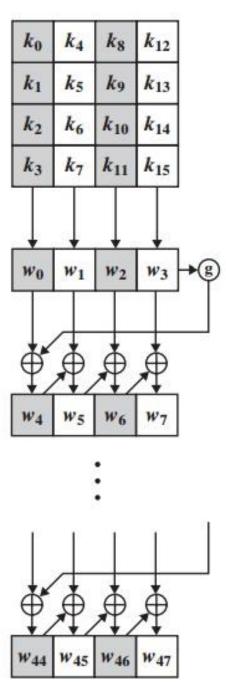

| $\begin{bmatrix} b_1 & b_5 & b_9 & b_{13} \\ b_2 & b_6 & b_{10} & b_{14} \\ b_3 & b_7 & b_{11} & b_{15} \\ b_4 & b_8 & b_{12} & b_{16} \end{bmatrix} \begin{bmatrix} 73 & 73 & 69 & 75 \\ 61 & 68 & 73 & 69 \\ 74 & 63 & 62 & 69 \\ 69 & 6a & 6f & 69 \end{bmatrix}$ | $\lceil b_1 \rceil$ | 73 69 | $b_5 b_9 b_{13}$] | 72 |

- 1. RotWord performs a one-byte circular left shift on a word. This means that an input word [b0, b1, b2, b3] is transformed into [b1,b2, b3, b0].
- 2. SubWord performs a byte substitution on each byte of its input word, using the S-box.
- 3. The result of steps 1 and 2 is XORed with a round constant, Rcon[j].

- Divide plain text to blocks of 128 bit block size
- Add round Key XOR with Plaintext
- Each round consists of a number of layers:
 - Byte substitution layer
 - Diffusion layer
 - Shift Rows
 - Mix Columns
 - Key addition layer

After XORING

Assignment

Use AES to encrypt and decrypt a message with the following requirements for the AES:

- •You will make the user choose between 128 bits, 192 bits 256 bits key.
- Key will be entered in hexadecimal format.
- Message will be entered in hexadecimal format.
- You have to show every step results in the CLI.
- •Sbox will be the same as mentioned in the slides (in hexadecimal format).
- •You should decrypt the message and get the original one in hexadecimal format.
- Note: the whole team must understand the whole code.
- •Will be submitted on blackboard by max 18th of Dec 2021, and will be discussed on that next lab.
